

As a professional driver, I've been using satellite radio to extend my reception of information while utilizing the public highways. At times it has saved me numerous hours tied up in traffic and protected my cargoes of perishables from sitting in long traffic delays. Any infringement on my capability to access this information which when provided by locals is spotty at best and none existant at most times would be an injustice to this company and expensive for drivers such as myself.

I've watched the satellite tv carriers ham strung by cable and local tv and video outlets in the name of protectionism, please don't allow this to happen to satellite radio. The public should have the to listen to this excellent source of information without any restrictions!
